

# ITP JS HW

## Week 3

1. Read the following article(s):
  - <https://developer.mozilla.org/en-US/docs/Web/API/Element/insertAdjacentHTML>
2. You're hired as a programmer in an elementary school. Your first task is to create a web page where teachers can input and store student's information.  
Write a program that takes a student's name, roll no, phone no, address using *HTML Forms*. The student is added in a *table* just below the form when the Add button is clicked. For your better understanding, a page mockup is given below:

Enter student information

Name

Age

Phone No

Address

Student Table

Name	Age	Phone No	Address

**NOTE:** Don't worry about storing information in the database. Your job would be to demonstrate that you can dynamically fill up a table from input data.
